

1. Requirements:

List the functional and non-functional requirements . Functional requirements should include Customer Details, Movie Details, Theatre Details, Show Details, Seat Availability, Seat Selection, Seat Booking, and Booking Confirmation. Mention required hardware and software requirements .

2. Algorithm:

Write a simple step-by-step algorithm for the Movie Booking and Seat Booking System, starting from entering customer details and ending with booking confirmation.

3. Flowchart:

Create a neat and easy-to-understand flowchart for the complete booking process. Use standard symbols: Oval = Start/End, Rectangle = Process, Parallelogram = Input/Output, Diamond = Decision. Include the decision "Is seat available?" with Yes/No paths.

4. ER Diagram:

Create a clear ER diagram for the Movie Booking System. Include entities such as Customer, Movie, Theatre, Show, Seat, and Booking. Show appropriate attributes, primary keys, foreign keys, and relationships/ cardinalities between the entities.
